Culture Media for the Detection and Enumeration of  
Food and Environmental Pathogens and Quality Indicators

# RAPID'Chromogenic Media Technology and Applications

RAPID'Chromogenic Media are a complete range of highly selective chromogenic agars designed to detect and enumerate various microorganisms in food and environmental samples. They offer economical, labor-saving protocols and provide a shorter time to results than classical methods. The combination of the selected chromogenic mixture with high-quality raw material allows for high levels of contrast, selectivity, and sensitivity — making these plates easy to read.
